

U.S. Patent Application No. 10/795,968  
Request for Reconsideration dated March 28, 2008  
Reply to Office Action of December 28, 2007

**Listing of Claims:**

Claims 1-35 (Canceled)

36. (Previously presented) Agglomerated niobium powder characterized by a capacitance of at least 65,000 CV/g and a DC leakage of less than 5.0 nA/CV when the agglomerated niobium powder is tested under electrical properties test conditions of sintering at a temperature of 1100° C for 10 minutes and anodizing at a formation voltage of 20Vf at 60° C.

37. (Previously presented) The niobium powder of claim 36, wherein said capacitance is from 65,000 to about 150,000 CV/g.

38. (Previously presented) The niobium powder of claim 36, wherein said capacitance is from about 75,000 to about 175,000 CV/g.

39. (Previously presented) The niobium powder of claim 36, wherein said capacitance is from about 100,000 to about 250,000 CV/g.

40. (Previously presented) The niobium powder of claim 36, wherein said capacitance is from about 125,000 to about 250,000 CV/g.

41. (Previously presented) The niobium powder of claim 36, wherein said capacitance is from about 100,000 to about 210,000 CV/g.

42. (Previously presented) The niobium powder of claim 36, wherein said DC leakage is from about 0.50 nA/CV to less than 5.0 nA/CV.

43. (Previously presented) The niobium powder of claim 36, wherein said niobium powder comprises flaked niobium powder.

44. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a BET surface area of at least about 5.5 m<sup>2</sup>/g.

U.S. Patent Application No. 10/795,968  
Request for Reconsideration dated March 28, 2008  
Reply to Office Action of December 28, 2007

45. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a BET surface area of at least about  $7.0 \text{ m}^2/\text{g}$ .

46. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a BET surface area of at least about  $10 \text{ m}^2/\text{g}$ .

47. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a BET surface area of from  $6.0 \text{ m}^2/\text{g}$  to about  $12 \text{ m}^2/\text{g}$ .

48. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has an oxygen content of less than 1,000 ppm.

49. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has an oxygen content of from about 2,000 ppm to about 60,000 ppm.

50. (Previously presented) The niobium powder of claim 36, wherein said niobium powder is nitrogen doped.

51. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has at least about 100 ppm of nitrogen present.

52. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has nitrogen present in an amount of from about 100 ppm to about 5,000 ppm.

53. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a flow of at least about  $80 \text{ mg/s}$ .

54. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a flow of from about 80 to about  $500 \text{ mg/s}$ .

55. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a Scott Density of about  $35 \text{ g/in}^3$  or less.

U.S. Patent Application No. 10/795,968  
Request for Reconsideration dated March 28, 2008  
Reply to Office Action of December 28, 2007

56. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a Scott Density of from about 10 to about 35 g/in<sup>3</sup>.

57. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a particle size of from 5 to 80 microns.

58. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has an aspect ratio of from about 3 to about 300.

59. (Canceled)

60. (Canceled)

61. (Previously presented) The niobium powder of claim 36, wherein said niobium powder has a Scott Density of about 35 g/in<sup>3</sup> or less, and a flow of at least about 80 mg/s.

62. (Previously presented) The niobium powder of claim 61, wherein said niobium powder has a particle size of from 5 to 80 microns.

63. (Previously presented) The niobium powder of claim 62, wherein said niobium powder has an aspect ratio of from about 3 to about 300.

64. (Previously presented) The niobium powder of claim 62, wherein said niobium powder is agglomerated.

65. (Previously presented) Agglomerated niobium powder characterized by a capacitance of at least 65,000 CV/g and a DC leakage of less than 5.0 nA/CV when the agglomerated niobium powder is tested under electrical properties test conditions of sintering at a temperature of 1100° C for 10 minutes and anodizing at a formation voltage of 35Vf at 60° C.
